

S3 Manufacturing Suite

Manufacturing isn't just a factory problem, it's a systems problem. Common production failures plague hardware companies, leading to costly delays, quality issues, and customer dissatisfaction.

Core Platform

Our core platform, the S3 Manufacturing suite, offers essential features for managing your production data and processes:

Centralized Data Management

A single source of truth for all production-related information

Multi-Device/Version Management

Track and manage multiple device types and revisions.

BOM Management with Version Control

Ensure you're always using the correct BOM.

Vendor Management

Manage your vendors and their performance.

Firmware Control

Control and track firmware versions.

Test Report Traceability

Link test reports to specific devices and production batches
